

Geophysics and Drilling Collaborations

Diamond Drilling Assessment Criteria

Assessment is against the Project Application and will only occur for those applications that meet the funding criteria.

Criteria	Available score	Applicant's score
Addresses significant knowledge gaps and/or critical uncertainties in key areas (general geological concept)	60	
Program is distant from previous diamond drilling at similar depth	20	
Delivers basic geological information (eg. age, stratigraphic relationships or resolve depth to geophysical target or basement)	20	
Tests innovative, soundly based economic deposit model or mineralising style	10	
Potential to advance exploration activity in under-explored areas	10	
Technical merit of proposed program (specifics of proposed work program)	20	
Type of drilling (eg. is triple tube used, full core vs diamond tails, quality of sample)	5	
Proposed methods of analysis (eg. dating, assays, isotopic analysis, downhole logging suite, petrography, QA/QC etc)	5	
Demonstrated knowledge of geology and past exploration in area of application	5	
Sufficient supporting evidence for target generation (including cross-sections and geology plan etc)	5	
Corporate capacity and performance and program schedule	20	
Financial and technical capacity of the proponent to undertake the proposed program	10	
Company has no outstanding reporting/compliance commitments; past performance in Collaborative programs	5	
Timing of proposed program	5	
Total	100
